

StreamPure Water Filter - Cleaning / Backwashing How-To

1. Disconnect the input and output hoses from the filter body.
2. Attach the backwash plunger to the output port.
3. Fill the plunger with clean, filtered water.
4. Push the plunger firmly to force water backward through the filter element.
5. Repeat 3-4 times until flow rate noticeably improves.
6. Clean after every 2-3 outings, or sooner if flow rate slows significantly.
