

Summit Trail 65 Backpack - Fitting & Adjustment Guide

1. Loosen all straps before putting the pack on for the first time.
2. Set the hip belt so it sits over the top of your hip bones, then tighten evenly.
3. Adjust shoulder straps snug, with anchor points about 1-2 inches below the shoulder.
4. Set load lifter straps to a 45-degree angle, pulling pack weight toward your torso.
5. Snug the sternum strap across your chest without restricting breathing.
6. Adjust the torso length using the internal frame ladder system to match your torso size.

Recommended pack weight: no more than 20 percent of body weight for multi-day trips.
