

Alpine Peak 2 Tent - Setup Manual

Cairn Outdoor Co. - Gear that finds your way.

1. Unroll the tent body on level ground, doors facing your preferred direction.
2. Assemble the two color-coded aluminum poles by connecting the shock-corded sections.
3. Feed each pole through its matching sleeve, starting from the labeled end.
4. Insert pole tips into the four corner grommets, then arch the poles to raise the tent.
5. Clip the tent body to the poles along each clip strip, working corner to corner.
6. Stake out the four corners, then the vestibule guy-lines, keeping the fabric taut.
7. Attach the rainfly, matching the color-coded corners, and clip it to the pole frame.
8. Tension the rainfly guy-lines last so the fly does not touch the tent body.

Setup time: approximately 8-10 minutes for two people.
